### **REASON FOR ALLOWANCE**

1. Holz discloses a car body for a rail vehicle, including a plurality of beams which are arranged to carry an outer sheet casing of one or more wall elements, wherein at least one of said beams includes an attaching member which is integral with the beam and which defines a recess extending substantially in the longitudinal direction of the beam, for engagement with at least pad of one or more components intended to be supported by the beam. Fehr et al disclose a car body for a rail vehicle, comprising a plurality of beams at least a portion of which are arranged to carry at least one wall element, wherein at least one of said beams includes an attaching member which is integral with the beam and extending substantially in the longitudinal direction of the beam, for engagement with at least part of one or more components intended to be supported by the beam. Hanni et al disclose the teaching of a plurality of beams made of either aluminum or steel with a substantially T-shaped recess, wherein the beam being arranged to support a floor, a side-wall or a roof of a vehicle. Takeda et al disclose a method for producing a rolled structural shape used in vehicle door frame comprising a recess portion. However, none of the references of record suggests a car body for a rail vehicle wherein each beam includes a sheet with a substantially constant thickness, and the attaching member is defined by the shape of the sheet in the manner defined in the instant claims 1, 15-16, and in combination with other limitations of the claims. Therefore, claims 5, 7, and 9 depending therefrom, are considered to be allowable.
